WORK EXPERIENCE

New York State Insurance Fund, *Data Analyst, New York, NY*

November 2024 – Present

- Develop multiple machine learning models using 500,000 rows of data to predict insurance claim outcomes
- Refactor existing code from R to Python to improve performance and compatibility with the code base
- Evaluate various Natural Language Processing Python packages by analyzing their speed and accuracy
- Design dashboards using HTML/CSS in Spotfire to help provide insights in data for business users
- Automate Python scripts using Pandas and NumPy to help clean and transform data for analysis

Scale.AI, *AI Contractor, New York, NY*

January 2024 – September 2024

- Trained and enhanced multiple LLM models by actively increasing correcting
- Curated a variety of training data for scaling LLMs' productivity in sandbox and real-world environments
- Conducted over 80 thorough peer reviews a week of colleagues' work to identify and resolve code issues

Upwork, *Freelance Data Analyst, New York,*

August 2023 – January 2024

- Created intuitive and automated dashboards, providing real-time insights and data analysis
- Analyzed data and created trend and statistical analyses to identify improvements for the client's business
- Diagnosed income stream of client trend and statistical analyses on over 80 ICD-10 codes
- Wrote user-friendly documentation on the dashboard to allow the customer to manage the project

State Street Corporation, *Data Analyst Intern, Boston MA*

June 2022 – August 2022

- Upgraded weekly reporting processes, saving managers 24 hours per week by utilizing Python
- Worked with users to understand their workflow in order to iterate on software improvements
- Generated interactive dashboards in Power BI, assisting end users in gaining insights
- Collected and analyzed 1500 survey data to understand employee sentiment on technology at the work place

Projects

NBA Fantasy Basketball Analysis

- Developed an R script that analyze NBA basketball players to aid in the Fantasy Basketball draft process
- Identified key categories within the game that would affect strategy for the entire season
- Simulated outcomes of other teams in order to understand the strengths and weakness of my own team

Flask Expense Calculator

- Built a personal finance app that allows users to track and categorize expenses
- Utilized Flask to create full stack application with a RESTful interface in order for it to be hosted online
- Designed a responsive interface for users to easily input and see their finances

Study Location Project

- Collaborated with two others to prototype an app that allows users to connect with friends studying nearby
- Gathered user story and developed time estimations to understand project requirements
- Integrated third-party OAuth login and two existing public APIs within the application

Canadian Rent Prices Power BI Dashboard

- Produced a dashboard that visualized rental properties across Canada based on price, location, and layout
- Identified trends and outliers found within the data set about the Canadian rental house listings
- Cleaned data using Python and Power BI's Power Query to remove duplicates and correct mislabeled entries
